CLASS: 7th

UNIT: 03

SUBJECT: MATHEMATICS

SESSION: 2021

SOLVED ASSIGNMENT OF UNIT-III

CHAPTER: LINES AND ANGLES

LESSON NO: 05

Ex. No. $\Rightarrow$ 5.1

Complementary angles $\Rightarrow$ When the sum of two angles is equal to 90° , then the angles are called Complementary angles.

Supplementary angles $\Rightarrow$ When the sum of two angles is equal to 180° , then the angles are called supplementary angles.

Q1 $\Rightarrow$ Answer the following questions:

a) what is the measure of the complement of the angle measuring 20° ?

Sol) Complement of the $20^\circ = 90^\circ - 20^\circ = 70^\circ$

b) what is the measure of the supplement of the angle measuring 130° ?

Sol) Supplement of the angle of $130^\circ = 180^\circ - 130^\circ = 50^\circ$

c) what is the measure of the complement of the angle measuring 65° ?

Sol) Complement of the angle of $65^\circ = 90^\circ - 65^\circ = 25^\circ$

d) If $\angle ABC$ & $\angle PQR$ are supplementary angles & $\angle PQR$ measures 32° . what is the measure of $\angle ABC$?

Sol) Supplement of $\angle PQR$ of $32^\circ = 180^\circ - 32^\circ = 148^\circ$
 $\Rightarrow \angle ABC$ is 148°

Q2: Two complementary angles are such that the measure of one is twice the measure of the other. Find the measure of the angles?

Sol) Let the measure of the smaller angle be x
Then, the measure of its complement be $2x$.
Ac. to Q.

$$x + 2x = 90^\circ$$

— [CA].

$$\Rightarrow 3x = 90^\circ$$

$$\Rightarrow x = \frac{90}{3} = 30$$

$$\Rightarrow x = 30^\circ$$

Hence the 1st complement angle $= x = 30^\circ$

Then 2nd complement angle $= 2x = 2 \times 30^\circ = 60^\circ$

Q3: Two supplementary angles are such that the measure of one angle is $\frac{4}{5}$ of the measure of the other angle. Find the measure of angles?

Sol) Let the measure of one supplement angle be x
Then, the measure of its supplement be $\frac{4}{5}x$
Ac. to Q.

$$\frac{x}{1} + \frac{4}{5}x = 180^\circ$$

— [SA]

$$\Rightarrow \frac{5x + 4x}{5} = 180$$

$\rightarrow$ [by CM].

$$\Rightarrow \frac{9x}{5} = 180^\circ$$

$$\Rightarrow x = 180 \div \frac{9}{5}$$

$$x = \frac{20}{180} \times \frac{5}{1}$$

$$\Rightarrow x = 20 \times 5$$

$$\Rightarrow x = 100^\circ$$

$\therefore$ Ist supplement angle $= x = 100^\circ$

$$\begin{aligned} \text{Then, 2nd supplement angle} &= \frac{4}{5}x \\ &= \frac{4}{5} \times 100^\circ \\ &= 4 \times 20 \\ &= 80^\circ \end{aligned}$$

Q5: An angle is equal to its supplement. what is its measure?

Sol) let the measure of angles be x .
its supplement angle be also x .
Ac. to Q.

$$x + x = 180^\circ$$

$$\Rightarrow 2x = 180^\circ$$

$$\Rightarrow 2x = 180^\circ$$

$$\Rightarrow x = \frac{180}{2} = 90^\circ$$

$$\Rightarrow x = 90^\circ$$

So, each angle is 90° .

Q6: write the measure of complement of each:

a) 46°

Sol) $90^\circ - 46^\circ = 44^\circ$

e) 61°

Sol) $90^\circ - 61^\circ = 29^\circ$

c) 42°

Sol) $90^\circ - 42^\circ = 48^\circ$

f) 27°

Sol) $90^\circ - 27^\circ = 63^\circ$

Q7: Write the measure of the angle which is supplement of the angle of the following measures:

a) 165°

Sol) $180^\circ - 165^\circ = 15^\circ$

c) 142°

Sol) $180^\circ - 142^\circ = 38^\circ$

e) 47°

Sol) $180^\circ - 47^\circ = 133^\circ$

f) 73

Sol) $180^\circ - 73^\circ = 107^\circ$

Q8: Separate the pairs of complementary and supplementary angles from the following:

a) $81^\circ, 99^\circ$

Sol) $81^\circ + 99^\circ = 180^\circ$

→ supplementary angles

b) $45^\circ, 45^\circ$

Sol) $45^\circ + 45^\circ = 90^\circ$

→ complementary angles.

d) $30^\circ, 60^\circ$

Sol) $30^\circ + 60^\circ = 90^\circ$

→ complementary angles.

g) $90^\circ, 90^\circ$

Sol) $90^\circ + 90^\circ = 180^\circ$

→ supplementary angles.

Ex : 5.2

Adjacent Angles → The angles having a common arm and a common vertex are called adjacent angles.

Linear Pair → A pair of adjacent angles whose sum is a straight line (180°) is called a linear pair.

Vertically opposite Angles → When two lines intersect, the angles that are formed opp. to each other at the pt. of intersection.

Q1: Are the angles marked 1 and 2 adjacent? If they are not adjacent angles, say 'why'?

a) They are adjacent angles

No, They are not adjacent angles because they are not having a common arm.

c)

No, They are not adjacent angles because they are not having common arm and not common vertex.

d)

Yes they are adjacent angles.

Q3: Write the pairs of adjacent angles.

Sol) $\angle 1$ and $\angle 6$ and
 $\angle 3$ and $\angle 4$
 are pairs of adjacent angles.

Q4: Name the angles:

a) Adjacent angles of $\angle BOC$

Sol) $\angle BOE$ and $\angle AOC$.

b) Vertically opposite to $\angle AOD$

Sol) $\angle BOC$

c) Forming linear pairs

Sol) $[\angle AOC, \angle COB]$, $[\angle AOD, \angle DOB]$
 $[\angle BOE, \angle AOE]$, $[\angle COE, \angle DOE]$
 $[\angle COB, \angle DOB]$.

Q5:→ which of the following pairs of angles can form a linear pair when placed adjacent to each other.

a)

Sol) $60^\circ + 100^\circ = 160^\circ$ it's not a linear pair

b)

Sol) $90^\circ + 90^\circ = 180^\circ$ yes, it's a linear pair

c)

Sol) $70^\circ + 70^\circ = 140^\circ$ it's not a linear pair

Q6:→ If $\angle 1 = 40^\circ$, what are measures of $\angle 2$ and $\angle 3$?

Sol) $\angle 1 = 40^\circ$

$\therefore \angle 1$ and $\angle 2$ form a linear pair

$$\therefore \angle 1 + \angle 2 = 180^\circ$$

$$\Rightarrow 40^\circ + \angle 2 = 180^\circ$$

$$\Rightarrow \angle 2 = 180^\circ - 40^\circ$$

$$\Rightarrow \angle 2 = 140^\circ$$

also $\angle 1 = \angle 3$ — vertically opposite $\angle$ s.

$$\Rightarrow \angle 3 = 40^\circ$$

Q8:→ Find the value of x , y and z in each of the following figures:

a) Sol) $\therefore x$ and 35° form a linear pair

$$\therefore x + 35^\circ = 180^\circ$$

$$\Rightarrow x = 180^\circ - 35^\circ$$

$$\Rightarrow x = 145^\circ$$

also $x = z$ — vertically opp. $\angle$ s

$$\Rightarrow z = 145^\circ$$

also $y = 35^\circ$ — vertically opp. $\angle$ s

$$\Rightarrow x = 145^\circ, y = 35^\circ, z = 145^\circ$$

b) $\therefore 40^\circ, x$ and 90° form a linear pair

$$\therefore 40^\circ + x + 90^\circ = 180^\circ$$

$$\Rightarrow 130^\circ + x = 180^\circ$$

$$\Rightarrow x = 180^\circ - 130^\circ$$

$$\Rightarrow x = 50^\circ$$

also $y = 40^\circ$ — vertically opp. $\angle$ s

also y and z form a linear pair

$$\Rightarrow y + z = 180^\circ$$

$$\Rightarrow 40^\circ + z = 180^\circ$$

$$\Rightarrow z = 180^\circ - 40^\circ$$

$$\Rightarrow z = 140^\circ$$

$$\Rightarrow x = 50^\circ, y = 40^\circ \text{ and } z = 140^\circ$$

Ex. No :- 5.3

Q1: l is parallel to m , n is transversal and $\angle 1 = 50^\circ$.

find the measure of other given angles:

Sol) we have $\angle 1 = 50^\circ$

$\therefore \angle 1$ and $\angle 2$ form a linear pair

$$\therefore \angle 1 + \angle 2 = 180^\circ$$

$$\Rightarrow 50^\circ + \angle 2 = 180^\circ$$

$$\Rightarrow \angle 2 = 180^\circ - 50^\circ$$

$$\Rightarrow \angle 2 = 130^\circ$$

also $\angle 2 = \angle 4$ — vertically opp. $\angle$ s

$$\Rightarrow \angle 4 = 130^\circ$$

also $\angle 1 = \angle 3$ — vertically opp. $\angle$ s

$$\Rightarrow \angle 3 = 50^\circ$$

also $\angle 3 = \angle 5$ — alternative interior angles.

$$\Rightarrow \angle 5 = 50^\circ$$

also $\angle 4 = \angle 6$ — alternative int. $\angle$ s

$$\Rightarrow \angle 6 = 130^\circ$$

also $\angle 5 = \angle 7$ — vertically opp. $\angle$ s

$$\Rightarrow \angle 7 = 50^\circ$$

also $\angle 6 = \angle 8$ — vertically opp. $\angle$ s

$$\Rightarrow \angle 8 = 130^\circ$$

Q2: $PQ \parallel BC$. Find the value of x .

Sol) $\because PQ \parallel BC$

$$\Rightarrow \angle BAP = 60^\circ \quad \text{— alternative } \angle$$

$$\text{and } \angle CAQ = 55^\circ \quad \text{— alternative } \angle.$$

Now $\angle BAP$, $\angle BAC$ and $\angle CAQ$ form a linear pair

$$\therefore \angle BAP + \angle BAC + \angle CAQ = 180^\circ$$

$$60^\circ + x + 55^\circ = 180^\circ$$

$$\Rightarrow 115^\circ + x = 180^\circ$$

$$\Rightarrow x = 180^\circ - 115^\circ$$

$$\Rightarrow x = 65^\circ$$

Q4: $l \parallel m$, find the unknown angles.

Sol) $l \parallel m$ and t is a Transversal.

$$\because a + 72^\circ = 180^\circ \quad \text{— linear pair}$$

$$\Rightarrow a = 180^\circ - 72^\circ$$

$$\Rightarrow a = 108^\circ$$

$$\text{also } a = b \quad \text{— vertically opp. } \angle$$

$$\Rightarrow b = 108^\circ$$

$$\text{also } 72^\circ = c \quad \text{— corresponding } \angle$$

$$\Rightarrow c = 72^\circ$$

CHAPTER :→ PERIMETER AND AREA

LESSON No :→ 11

Ex: 11.1

NOTE :→

- 1) Area of Square = $(\text{side})^2$
- 2) Perimeter of Square = $4(\text{side})$.
- 3) Area of Rectangle = length $\times$ breadth
- 4) Perimeter of rectangle = $2[\text{length} + \text{breadth}]$.

Q1) Find the Area of Square whose perimeter is 40cm?

Sol) Perimeter of Square = 40cm

$$\Rightarrow 4 \times \text{side} = 40\text{cm}$$

$$\Rightarrow \text{side} = \frac{40\text{cm}}{4}$$

$$\Rightarrow \text{side} = 10\text{cm}$$

$$\begin{aligned} \text{Now, Area of Square} &= (\text{side})^2 \\ &= \text{side} \times \text{side} \\ &= 10\text{cm} \times 10\text{cm} \\ &= 100\text{cm}^2. \end{aligned}$$

Q3) Determine the area of a rectangle whose length is 16cm & perimeter is 48cm?

Sol) length of rectangle = 16cm
breadth = b

$$\text{Perimeter of rect.} = 2[l + b]$$

$$\Rightarrow 2[l + b] = 48\text{cm}$$

$$\Rightarrow 2[16 + b] = 48\text{cm}$$

$$\Rightarrow 2(16) + 2b = 48\text{cm}.$$

Q2: Find the Perimeter of a Square whose area is 25 sq. cm.?

Sol) Area of Square = 25cm^2

$$\Rightarrow (\text{side})^2 = 25\text{cm}^2$$

$$\Rightarrow (\text{side})^2 = (5\text{cm} \times 5\text{cm})$$

$$\Rightarrow (\text{side})^2 = (5\text{cm})^2$$

$$\Rightarrow \text{side} = 5\text{cm}.$$

$$\begin{aligned} \text{Now, Perimeter of Square} &= 4 \times \text{side} \\ &= 4 \times 5\text{cm} \\ &= 20\text{cm}. \end{aligned}$$

Q5: Find the cost of lamination of photograph of size 60cm $\times$ 35cm at the rate of 2 per 100 cm square.

Sol) length of photograph = 60cm
breadth = 35cm

$$\begin{aligned} \therefore \text{Area of photograph} &= l \times b \\ &= 60\text{cm} \times 35\text{cm} \\ &= 2100\text{cm}^2 \end{aligned}$$

2
per.

$$\Rightarrow 32 + 2b = 48 \text{ cm}$$

$$\Rightarrow 2b = 48 - 32$$

$$\Rightarrow 2b = 16 \text{ cm}$$

$$\Rightarrow b = \frac{16 \text{ cm}}{2}$$

$$\Rightarrow b = 8 \text{ cm}$$

$$\begin{aligned} \text{Now, Area of rect.} &= l \times b \\ &= 16 \text{ cm} \times 8 \text{ cm} \\ &= 128 \text{ cm}^2 \end{aligned}$$

Q7: The length & breadth of a rectangular field are in the ratio 3:2. If the area of the field is 3456 Sq.m. find the cost of fencing the field at ₹ 4 per meter.

Sol) let the length of field = $3x$
& breadth = $2x$.

$$\text{Now Area of field} = 3456 \text{ m}^2$$

$$\Rightarrow l \times b = 3456 \text{ m}^2$$

$$\Rightarrow 3x \times 2x = 3456 \text{ m}^2$$

$$\Rightarrow 6x^2 = 3456 \text{ m}^2$$

$$\Rightarrow x^2 = \frac{3456 \text{ m}^2}{6}$$

8,

$$\Rightarrow x^2 = 576 \text{ m}^2$$

$$\Rightarrow x^2 = 24 \text{ m} \times 24 \text{ m}$$

$$\Rightarrow x^2 = (24 \text{ m})^2$$

Now, Cost of lamination per $100 \text{ cm}^2 = ₹ 2$

$$\therefore \text{Cost of lamination } 1 \text{ cm}^2 = \frac{2}{100}$$

$$\therefore \text{Total Cost of lamination} =$$

$$= \frac{2}{100} \times 12800$$

$$= 2 \times 128$$

$$= ₹ 256$$

Q10: The area of a square plot is 6084 sq.m. find the length of the wire which can go three times along the boundary of the plot?

Sol) Area of plot = 6084 m^2

$$\Rightarrow (\text{side})^2 = 6084 \text{ m}^2$$

$$\Rightarrow (\text{side})^2 = 78 \text{ m} \times 78 \text{ m}$$

$$\Rightarrow (\text{side})^2 = (78 \text{ m})^2$$

$$\Rightarrow \text{side} = 78 \text{ m.}$$

$$\begin{aligned} \text{Now perimeter of plot} &= 4 \times \text{side} \\ &= 4 \times 78 \text{ m} \end{aligned}$$

$$= 312 \text{ m}$$

$$\begin{aligned} \text{Now length of wire that go three time along boundary} &= 3 \times 312 \text{ m} \\ &= 936 \text{ m} \end{aligned}$$

$$x = 24m.$$

$$\begin{aligned}\text{length of plot} &= 3x \\ &= 3 \times 24m \\ &= 72m\end{aligned}$$

$$\begin{aligned}\text{breadth of plot} &= 2x \\ &= 2 \times 24m \\ &= 48m\end{aligned}$$

$$\begin{aligned}\text{Now, perimeter of plot} &= 2(l+b) \\ &= 2[72m + 48m] \\ &= 2[120m] \\ &= 240m\end{aligned}$$

$$\begin{aligned}\therefore \text{Cost of fencing} &= ₹4 \times 240 \\ &= ₹960\end{aligned}$$

Q14:→ The floor of a room is of dimensions 4m x 6m. Tiles of size 10cm x 12cm have to lay on it. How many tiles are reqd. to cover the floor?

$$\begin{aligned}\text{Sol) length of room} &= 4m \\ &= 4 \times 100cm \\ &= 400cm\end{aligned}$$

$$\begin{aligned}\text{Breadth of room} &= 6m \\ &= 6 \times 100cm \\ &= 600cm\end{aligned}$$

$$\therefore [1m = 100cm]$$

$$\begin{aligned}\text{Now Area of room} &= l \times b \\ &= 400cm \times 600cm \\ &= 240000cm^2\end{aligned}$$

$$\begin{aligned}\text{Now length of tile} &= 10cm \\ \text{breadth} &= 12cm\end{aligned}$$

$$\begin{aligned}\therefore \text{Area of tile} &= l \times b \\ &= 10cm \times 12cm \\ &= 120cm^2\end{aligned}$$

$$\therefore \text{No. of tiles reqd.} = \frac{\text{Area of room}}{\text{Area of tile}}$$

$$\begin{aligned}&= \frac{240000cm^2}{120cm^2} \\ &= 2000 \text{ Tiles}\end{aligned}$$

$\therefore$ No. of tiles reqd. to cover the floor is 2000.

Ex: 11.2

Q1:→ Find the area of the path whose width is 2m and which runs around outside a square field of side 40m.

Sol) Let ABCD represents the square field with side 40m

$$\therefore \text{Area of square ABCD} = (\text{side})^2$$

$$= \text{side} \times \text{side}$$

$$= 40\text{m} \times 40\text{m}$$

$$= 1600\text{m}^2$$

Now length of field including path

$$= 40\text{m} + 2\text{m} + 2\text{m}$$
$$= 44\text{m}$$

$\therefore$ Now Area of square including path

$$= (\text{side})^2$$

$$\Rightarrow \text{Area of PQRS} = \text{side} \times \text{side}$$
$$= 44\text{m} \times 44\text{m}$$
$$= 1936\text{m}^2$$

$$\therefore \text{Area of path} = \text{Area of PQRS} - \text{Area of ABCD}$$
$$= 1936\text{m}^2 - 1600\text{m}^2$$
$$= 336\text{m}^2$$

Q3:→ A carpet measures 24m by 16m. A strip of 2m wide is cut from it all around. Find the area of the remaining carpet & also the area of the strip cut out?

Sol) Let ABCD represents the carpet with

$$\text{length} = 24\text{m}$$

$$\text{breadth} = 16\text{m}$$

$$\therefore \text{Area of carpet ABCD} = l \times b$$
$$= 24\text{m} \times 16\text{m}$$
$$= 384\text{m}^2$$

Now length of carpet without strip

$$= 24 - (2\text{m} + 2\text{m})$$

$$PQ = 24m - 4m = 20m$$

$$\text{breadth} = QR = 16m - (2m + 2m)$$

$$= 16m - 4m = 12m.$$

Now, Area of carpet with out strips PQRS = $l \times b$

$$= 20m \times 12m$$

$$= 240m^2.$$

$\therefore$ Area of strip (shaded portion) = Area of ABCD
 - Area of PQRS

$$= 384m^2 - 240m^2$$

$$= 144m^2$$

Q5: A painting of dimensions $40cm \times 30cm$ is framed with a silk border of width $4cm$ on all its sides. Find the area of the silk bord. & also the total area of framed painting?

Sol) Let ABCD represents the painting with

with length = $40cm$

& breadth = $30cm$

$\therefore$ Area of painting ABCD = $l \times b$

$$= 40cm \times 30cm$$

$$= 1200cm^2$$

Now length of painting with border PQ = $4cm + (4cm + 4cm)$

$$= 4cm + 8cm = 48cm$$

Breadth = $30cm + 8cm = 38cm$

Now Area of painting with border PQRS = $l \times b$

$$= 48cm \times 38cm$$

$$= 1824cm^2$$

$\therefore$ Total area of framed painting = $1824cm^2$

Now Area of silk border = Area of PQRS
 - Area of ABCD

$$= 1824cm^2 - 1200cm^2$$

$$= 624cm^2.$$

Note: [Practice the remaining questions by using same method]

Ex: 11.3

(Ac) 2
(Sc) 10

Note: $\rightarrow$

- 1) Area of Triangle = $\frac{1}{2} \times \text{base} \times \text{corresponding altitude}$
- 2) Area of an equilateral triangle = $\frac{\sqrt{3}}{4} a^2$.

Q1: $\rightarrow$ Find the area of a Δ whose base is 40cm & the corresponding altitude is 12cm long?

Sol) Base = 40cm
Altitude = 12cm

$$\begin{aligned}\therefore \text{Area of } \Delta &= \frac{1}{2} \times \text{base} \times \text{altitude} \\ &= \frac{1}{2} \times 40\text{cm} \times 12\text{cm} \\ &= 40\text{cm} \times 6\text{cm} \\ &= 240\text{cm}^2\end{aligned}$$

Q4: $\rightarrow$ The base of a rt-angled triangle is 4cm & the hypotenuse is 5cm. Find the area of the Δ ?

Sol)

Let ABC be a rt-angled Δ with Base = 4cm

& Hypotenuse AC = 5cm

Using Pythagoras theorem

$$(\text{Hyp})^2 = (\text{Base})^2 + (\text{Per})^2$$

Q2: $\rightarrow$ The area of an equilateral triangle is $81\sqrt{3}$ sq.cm. Find the perimeter of the Δ ?

Sol) Area of $\Delta = 81\sqrt{3}\text{cm}^2$

$$\frac{\sqrt{3}}{4} a^2 = 81\sqrt{3}\text{cm}^2$$

$$\Rightarrow a^2 = 81\sqrt{3} \times \frac{4}{\sqrt{3}}\text{cm}^2$$

$$\Rightarrow a^2 = 9 \times 9 \times 2 \times 2\text{cm}^2$$

$$\Rightarrow a^2 = (9 \times 2\text{cm})^2$$

$$\Rightarrow a^2 = (18\text{cm})^2$$

$$\Rightarrow a = 18\text{cm}.$$

$\therefore$ Side of eq. Triangle = 18cm

$$\begin{aligned}\therefore \text{Perimeter of } \Delta &= 3 \text{ side} \\ &= 3 \times 18\text{cm} \\ &= 54\text{cm}.\end{aligned}$$

Q5: $\rightarrow$ The base of a triangle is 23cm long & its area is 161 sq.cm. Find the length of the corresponding altitude?

Sol) Base = 23cm

$$\text{Area of } \Delta = 161\text{cm}^2$$

$$\begin{aligned}
 (AC)^2 &= (BC)^2 + (AB)^2 \\
 (5\text{cm})^2 &= (4\text{cm})^2 + (AB)^2 \\
 25\text{cm}^2 &= 16\text{cm}^2 + (AB)^2 \\
 \Rightarrow (AB)^2 &= 25\text{cm}^2 - 16\text{cm}^2 \\
 \Rightarrow (AB)^2 &= 9\text{cm}^2 \\
 \Rightarrow (AB)^2 &= (3\text{cm} \times 3\text{cm}) \\
 \Rightarrow (AB)^2 &= (3\text{cm})^2 \\
 \Rightarrow AB &= 3\text{cm}.
 \end{aligned}$$

$$\begin{aligned}
 \therefore \text{altitude of } \Delta &= 3\text{cm} \\
 \therefore \text{Area of } \Delta &= \frac{1}{2} \times B \times A \\
 &= \frac{1}{2} \times 4\text{cm} \times 3\text{cm} \\
 &= 2\text{cm} \times 3\text{cm} \\
 &= 6\text{cm}^2
 \end{aligned}$$

Q9: In a triangle, if the length of altitude is double of its base & the area is 400sq. cm . find the length of base & altitude?

Sol) Let the base of Δ be x .
Then, altitude be $2x$.

$$\begin{aligned}
 \text{Now Area of } \Delta &= 400\text{cm}^2 \\
 \Rightarrow \frac{1}{2} \times b \times \text{alt.} &= 400\text{cm}^2
 \end{aligned}$$

$$\Rightarrow \frac{1}{2} \times x \times 2x = 400\text{cm}^2$$

$$\begin{aligned}
 \Rightarrow x^2 &= 400\text{cm}^2 \\
 \Rightarrow x^2 &= 20\text{cm} \times 20\text{cm} \\
 \Rightarrow x^2 &= (20\text{cm})^2 \\
 \Rightarrow x &= 20\text{cm}.
 \end{aligned}$$

$$\therefore \text{base} = x = 20\text{cm}.$$

$$\text{altitude} = 2x \Rightarrow 2 \times 20\text{cm} = 40\text{cm}$$

$$\Rightarrow \frac{1}{2} \times \text{base} \times \text{altitude} = 16\text{cm}^2$$

$$\Rightarrow \frac{1}{2} \times 23\text{cm} \times \text{altitude} = 16\text{cm}^2$$

$$\Rightarrow \frac{23\text{cm} \times \text{altitude}}{2} = 16\text{cm}^2$$

$$\Rightarrow \text{altitude} = 16\text{cm}^2 \div \frac{23\text{cm}}{2}$$

$$\Rightarrow \text{altitude} = 16\text{cm}^2 \times \frac{2}{23\text{cm}}$$

$$\Rightarrow \text{altitude} = 7\text{cm} \times 2$$

$$= 14\text{cm}.$$

$$\therefore \text{altitude} = 14\text{cm}.$$

Q10: PQR is an isosceles Δ in which the base QR is 16cm & each side PQ & PR is 10cm . find the area of Δ PQR?

Sol) In Δ PQR.

$$PQ = PR = 10\text{cm}$$

$$\& \text{ QR is } = 16\text{cm}.$$

Draw a perpendicular PD from P to QR.

Now in rt. Δ PQD.

Using pythagoras theorem.

$$(\text{Hyp})^2 = (\text{Base})^2 + (\text{Per})^2$$

$$(PQ)^2 = (QD)^2 + (PD)^2$$

$$(10\text{cm})^2 = (8\text{cm})^2 + (PD)^2$$

$$100\text{cm}^2 = 64\text{cm}^2 + (PD)^2$$

$$\Rightarrow (PD)^2 = 100\text{cm}^2 - 64\text{cm}^2$$

$$\Rightarrow (PD)^2 = 36\text{cm}^2$$

figure of Q: 10

$$\Rightarrow (PD)^2 = 6\text{cm} \times 6\text{cm}$$

$$\Rightarrow (PD)^2 = (6\text{cm})^2$$

$$\Rightarrow PD = 6\text{cm}.$$

Now Area of $\triangle PQR =$

$$= \frac{1}{2} \times \text{base} \times \text{altitude}$$

$$= \frac{1}{2} \times QR \times PD$$

$$= \frac{1}{2} \times 16\text{cm} \times 6\text{cm}$$

$$= 16\text{cm} \times 3\text{cm}$$

$$= 48\text{cm}^2$$

Ex : 11.4

NOTE $\Rightarrow$

Area of parallelogram = base $\times$ corresponding altitude.

Q1: $\Rightarrow$ One side of parallelogram is 20cm long & the corresponding altitude is 14cm long. Find the area of the parallelogram?

Sol) Base = 20cm.
altitude = 14cm

$$\therefore \text{Area of parallelogram} = \text{base} \times \text{altitude}$$

$$= 20\text{cm} \times 14\text{cm}$$

$$= 280\text{cm}^2$$

Q2: $\Rightarrow$ Area of the parallelogram ABCD is 225 sq. cm. If its altitude is 10cm long, find the length of the corresponding base of the parallelogram?

Sol) Altitude = 10cm.

$$\text{Area of parallelogram} = 225\text{cm}^2$$

$$\Rightarrow \text{base} \times \text{altitude} = 225\text{cm}^2$$

$$\Rightarrow \text{base} \times 10\text{cm} = 225\text{cm}^2$$

$$\Rightarrow \text{base} = \frac{225\text{cm}^2}{10\text{cm}}$$

$$\Rightarrow \text{base} = 22.5\text{cm}$$

Q3: ABCD is a parallelogram, $AB = 9\text{m}$, $BC = 5\text{m}$ & CE is perpendicular to AB. If the area of parallelogram is 36sq.m , find the length of EB.

Sol) Base of //gram = 9m .
 Area of //gram = 36cm^2
 $\text{base} \times \text{altitude} = 36\text{cm}^2$
 $9\text{cm} \times \text{altitude} = 36\text{cm}^2$
 $\Rightarrow \text{altitude} = \frac{36\text{cm}^2}{9\text{cm}}$
 $\Rightarrow \text{altitude} = 4\text{cm}$

Now in rt. Δ CEB.

Using pythagoras theorem.

$$\begin{aligned} (\text{Hyp})^2 &= (\text{Base})^2 + (\text{Per})^2 \\ (CB)^2 &= (EB)^2 + (CE)^2 \\ (5\text{cm})^2 &= (EB)^2 + (4\text{cm})^2 \\ 25\text{cm}^2 &= (EB)^2 + 16\text{cm}^2 \\ \Rightarrow (EB)^2 &= 25\text{cm}^2 - 16\text{cm}^2 \\ \Rightarrow (EB)^2 &= 9\text{cm}^2 \\ \Rightarrow (EB)^2 &= 3\text{cm} \times 3\text{cm} \\ \Rightarrow (EB)^2 &= (3\text{cm})^2 \\ \Rightarrow EB &= 3\text{cm}. \end{aligned}$$

Q4: The floral design on the floor of a building consists of 2600 tiles. Each tile is in the shape of a parallelogram of altitude 3cm long & base 5cm long. find the cost of polishing the design at the rate of $\text{₹ } 150$ per square meter.

Sol) Total no. of tiles = 2600
 Base of tile = 5cm .
 altitude of tile = 3cm .
 $\therefore \text{Area of 1 tile} = b \times \text{alt.}$
 $= 5\text{cm} \times 3\text{cm}$
 $= 15\text{cm}^2$

$\therefore \text{Area of 2600 tiles} =$
 $= 2600 \times 15\text{cm}^2$
 $= 39000\text{cm}^2$

Now, we know.

$$10000\text{cm}^2 = 1\text{m}^2$$

$$\Rightarrow 1\text{cm}^2 = \frac{1}{10000}\text{m}^2$$

$$\begin{aligned} \Rightarrow 39000\text{cm}^2 &= \frac{1}{10000} \times 39000\text{m}^2 \\ &= \frac{39}{10}\text{m}^2 \quad \text{or} \\ &= 3.9\text{m}^2 \end{aligned}$$

Now cost of polishing
 $1\text{m}^2 = \text{₹ } 150$.

Q5: In a parallelogram, the length of the altitude is twice the length of the base. its area is 450 cm^2 . find the length of the base & of the altitude?

Sol) let base of a parallelogram be x .

then, altitude = $2x$.

Now, Area of parallelogram = base $\times$ altitude.

$$\Rightarrow 450 \text{ cm}^2 = x \times 2x$$

$$\Rightarrow 450 \text{ cm}^2 = 2x^2$$

$$\text{or } 2x^2 = 450 \text{ cm}^2$$

$$\Rightarrow x^2 = \frac{450}{2} \text{ cm}^2$$

$$\Rightarrow x^2 = 225 \text{ cm}^2$$

$$\Rightarrow x^2 = 15 \text{ cm} \times 15 \text{ cm}$$

$$\Rightarrow x^2 = (15 \text{ cm})^2$$

$$\Rightarrow x = 15 \text{ cm}$$

$$\therefore \text{Base} = x = 15 \text{ cm}$$

$$\text{altitude} = 2x$$

$$= 2 \times 15 \text{ cm}$$

$$= 30 \text{ cm.}$$

$$\therefore \text{Total cost of polishing} =$$

$$= \frac{39}{10} \times 150$$

$$= 39 \times 15$$

$$= ₹ 585$$

Q8: The height of a //gram is one third of its base.

if the area of the //gram is 108 cm^2 . find the length of its base & altitude.

Sol) let base of //gram = x
then altitude = $\frac{1}{3}x$.

$$\therefore \text{Area of //gram} = 108 \text{ cm}^2$$

$$\Rightarrow \text{base} \times \text{altitude} = 108 \text{ cm}^2$$

$$\Rightarrow x \times \frac{x}{3} = 108 \text{ cm}^2$$

$$\Rightarrow \frac{x^2}{3} = 108 \text{ cm}^2 \quad \text{--- by cm}$$

$$\Rightarrow x^2 = 108 \text{ cm}^2 \times 3$$

$$\Rightarrow x^2 = 2 \times 2 \times 3 \times 3 \times 3 \times 3 \text{ cm}^2$$

$$\Rightarrow x^2 = (2 \times 3 \times 3 \text{ cm})^2$$

$$\Rightarrow x^2 = (18 \text{ cm})^2$$

$$\Rightarrow x = 18 \text{ cm.}$$

$$\therefore \text{Base} = x = 18 \text{ cm.}$$

$$\text{altitude} = \frac{1}{3}x$$

$$= \frac{1}{3} \times 18 \text{ cm}$$

$$= 6 \text{ cm.}$$

Ex: 11.5NOTE $\rightarrow$

- 1) Area of circle $= \pi r^2$
- 2) Circumference of circle $= 2\pi r$.
- 3) Diameter $= 2 \times \text{radius}$.
- 4) Radius $= \frac{\text{Diameter}}{2}$.

Q2: Find the circumference of a circle of radius 5cm.
Take $\pi = 3.14$.

Sol) Radius = 5cm.
Circumference of circle $= 2\pi r$
 $= 2 \times 3.14 \times 5\text{cm}$
 $= 10 \times 3.14\text{cm}$
 $= 31.40\text{cm}$

Q4: A piece of wire in the form of a rectangle with dimensions 12m by 10m is reshaped to form a circle. Find the diameter of circle?

Sol) length of rectangle = 12m
 breadth = 10m
 $\therefore$ perimeter of rectangle $= 2(l+b)$
 $= 2(12\text{m} + 10\text{m})$
 $= 2(22\text{m})$
 $= 44\text{m}$

Now, perimeter of rectangle
 $=$ circumference of circle
 $\Rightarrow 44\text{m} = 2\pi r$

Q3: What is the circumference of a circular plate of radius 10.5cm. Take $\pi = 3.14$

Sol) Radius = 10.5cm
 circumference $= 2\pi r$
 $= 2 \times 3.14 \times 10.5\text{cm}$
 $= 6.28 \times 10.5\text{cm}$
 $= 65.940\text{cm}$

Q6: A track is in the form of a ring whose inner and outer circumference are 55m & 132m resp. Find the width of the track?

Sol) Let radius of outer track be R.
 $\therefore$ Circumference of outer track = 132m
 $2\pi R = 132\text{m}$
 $\Rightarrow 2 \times \frac{22}{7} \times R = 132\text{m}$
 $\Rightarrow \frac{44}{7} \times R = 132\text{m}$
 $\Rightarrow R = \frac{132\text{m} \times 7}{44}$

$$\text{or } 2\pi r = 44\text{m}$$

$$\Rightarrow 2 \times \frac{22}{7} \times r = 44\text{m}$$

$$\Rightarrow \frac{44}{7} \times r = 44\text{m}$$

$$\Rightarrow r = 44\text{m} \div \frac{44}{7}$$

$$\Rightarrow r = 44\text{m} \times \frac{7}{44}$$

$$\Rightarrow r = 7\text{m}$$

$$\therefore \text{Diameter} = 2 \times \text{radius} \\ = 2 \times 7\text{m} \\ = 14\text{m}$$

$$\Rightarrow R = 3\text{m} \times 7 = 21\text{m}$$

Now, let radius of inner track be r
circumference of inner track = 55m

$$\Rightarrow 2\pi r = 55\text{m}$$

$$\Rightarrow 2 \times \frac{22}{7} \times r = 55\text{m}$$

$$\Rightarrow \frac{44}{7} \times r = 55\text{m}$$

$$\Rightarrow r = \frac{55 \times 7}{44}$$

$$\Rightarrow r = \frac{5 \times 7}{4}$$

$$\Rightarrow r = \frac{35}{4}\text{m} = 8.75\text{m}$$

$$\text{Now, width of track} = R - r \\ = 21\text{m} - 8.75\text{m} \\ = 12.25\text{m}$$

Ex: 11.6

Q1) Find the area of the following circles, given that

a) Radius = 14cm

Take $\pi = \frac{22}{7}$

Sol) Radius = 14cm

$$\therefore \text{Area of circle} = \pi r^2 \\ = \pi (14\text{cm})^2 \\ = \frac{22}{7} \times 14\text{cm} \times 14\text{cm}$$

$$= 22 \times 14\text{cm} \times 2\text{cm}$$

$$= 44 \times 14\text{cm}$$

$$= 616\text{cm}^2$$

c) Diameter = 35cm

Take $\pi = 3.14$

Sol) diameter = 35cm

$$\therefore \text{Radius} = \frac{D}{2} = \frac{35\text{cm}}{2} \\ = 17.5\text{cm}$$

$$\therefore \text{Area of circle} = \pi r^2 \\ = 3.14 \times (17.5\text{cm})^2 \\ = 3.14 \times 17.5\text{cm} \times 17.5\text{cm} \\ = 3.14 \times 306.25\text{cm}^2 \\ = 961.625\text{cm}^2$$

Q3: If the circumference of a circular sheet is 154 cm, find its radius. Also, find the area of the sheet ($\pi = 22/7$)

Sol) Circumference of Sheet = 154 cm

$$\Rightarrow 2\pi r = 154 \text{ cm}$$

$$\Rightarrow 2 \times \frac{22}{7} \times r = 154 \text{ cm}$$

$$\Rightarrow \frac{44}{7} \times r = 154 \text{ cm}$$

$$\Rightarrow r = \frac{154 \text{ cm} \times 7}{44}$$

$$\Rightarrow r = \frac{7 \text{ cm} \times 7}{2}$$

$$\Rightarrow r = \frac{49}{2} \text{ cm} = 24.5 \text{ cm}$$

$$\therefore \text{Area of circle} = \pi r^2$$

$$= \frac{22}{7} \times \left(\frac{49}{2}\right)^2$$

$$= \frac{22}{7} \times \frac{49^2}{2}$$

$$= \frac{77 \times 49}{2} \text{ cm}^2$$

$$= \frac{3773}{2} \text{ cm}^2$$

$$= 1886.5 \text{ cm}^2$$

$\therefore$ Area of circle is 1886.5 cm²

Q4: From a square sheet of each side 7 cm a circle of radius 3.5 cm is removed from the centre of the square sheet. Find the area of the remaining sheet?

Sol) Side of square = 7 cm

$$\therefore \text{Area of square} = (\text{side})^2$$

$$= \text{side} \times \text{side}$$

$$= 7 \text{ cm} \times 7 \text{ cm}$$

$$= 49 \text{ cm}^2$$

Now Radius of circle = 3.5 cm

$$\therefore \text{Area of circle} = \pi r^2$$

$$= 3.14 \times (3.5 \text{ cm})^2$$

$$= 3.14 \times (3.5 \text{ cm} \times 3.5 \text{ cm})$$

$$= 3.14 \times 12.25 \text{ cm}^2$$

$$= 38.4650 \text{ cm}^2$$

Now, Area of remaining sheet = Area of square

$$- \text{Area of circle}$$

$$= 49 \text{ cm}^2 - 38.4650 \text{ cm}^2$$

$$= 10.5350 \text{ cm}^2$$

7 cm

fig of Q no: 4.

Q6: A circle is inscribed in a semi-circle of radius 6cm. Find the area of shaded portion (Take $\pi = 3.14$)

Sol) Radius of semi-circle = 6cm.

$$\begin{aligned} \therefore \text{Area of semi-circle} &= \frac{\pi r^2}{2} \\ &= \frac{3.14 \times (6\text{cm})^2}{2} \\ &= \frac{3.14 \times 6\text{cm} \times 6\text{cm}}{2} \\ &= 3.14 \times 18\text{cm}^2 \\ &= 56.52\text{cm}^2. \end{aligned}$$

Now, diameter of inscribed circle = 6cm

$$\Rightarrow \text{Radius of inscribed circle} = \frac{d}{2} = \frac{6\text{cm}}{2} = 3\text{cm}$$

Now, Area of inscribed circle = πr^2

$$\begin{aligned} &= 3.14 \times (3\text{cm})^2 \\ &= 3.14 \times 3\text{cm} \times 3\text{cm} \\ &= 3.14 \times 9\text{cm}^2 \\ &= 28.26\text{cm}^2 \\ &= 0 = \end{aligned}$$

Q7: A circus tent has a radius of 30m. The ring at its centre for the performance is of 10m of radius. Find the area left for audience (Take $\pi = 3.14$) Sol)

Radius of tent = 30m.

$$\begin{aligned} \therefore \text{Area of tent} &= \pi r^2 \\ &= 3.14 \times (30\text{m})^2 \\ &= 3.14 \times 30\text{m} \times 30\text{m} \\ &= 3.14 \times 900\text{m}^2 \\ &= 2826.00\text{m}^2 \end{aligned}$$

Now Radius of ring = 10m

$$\begin{aligned} \therefore \text{Area of ring} &= \pi r^2 \\ &= 3.14 \times (10\text{m})^2 \\ &= 3.14 \times 10\text{m} \times 10\text{m} \\ &= 3.14 \times 100\text{m}^2 \\ &= 314\text{m}^2 \end{aligned}$$

$$\begin{aligned} \therefore \text{Area left for audience} &= \text{Area of tent} - \text{Area of ring} \\ &= 2826.00\text{m}^2 - 314\text{m}^2 \\ &= 2512\text{m}^2 \end{aligned}$$

NOTE:

Area $\Rightarrow$ The space occupied by the surface of an object.
Perimeter $\Rightarrow$ The perimeter is the distance around the object.
